

# But Wait...

Ok, a marketplace for hooks is great, but...

Once the hook is connected to a pool and deployed on-chain...

Can't someone just DECOMPILE the bytecode?

0x608060405234...

Decompiling tools are getting cheaper.

Why pay subscription when you can just... copy?

**BYTECODE EXPOSED**

# Fhenix FHE Solution

## FULLY HOMOMORPHIC ENCRYPTION

### BEFORE:

- Hook Function Calldata:   
0x608060405234...  
(readable)
- Decompiling Cost:   
\$100-1,000

### AFTER:

- Hook Function Calldata:  [ENCRYPTED]  ?  
(unreadable)
- Decompiling Cost:   
\$1,000,000+

Decompiling cost  
goes to the moon!

# Compliance Verification Challenge

| HOOO SPEC DOCUMENT   | SOURCE CODE   |
|----------------------|---------------|
| ✓ Can read           | ✗ No access   |
| ✓ Looks good         | ? Trust issue |
| ✓ Formal description | ? Compliance? |

**How do I know it does what it says?**

# EigenLayer AVS Attestation

## AVS OFF-CHAIN OPERATOR

Verified compliance.  
No source code needed.

## SOLUTION

### PROVER ATTESTATION:

- ✓ Compliance Score (detailed metrics)
- ✓ Developer Reputation tracking
- ✓ Audit history integration

### COMPATIBILITY VERIFICATION:

- ✓ Fuzzing integration tests
- ✓ Protocol-specific semantics check
- ✓ Adapter recommendations

**RESULT: Trust without source code access!**
